PROFILE

iOS and macOS software engineer with 3+ years at **42Gears Mobility Systems**, an established Indian enterprise-software vendor whose Unified Endpoint Management platform manages device fleets for business customers worldwide. I build and operate the macOS agent that runs continuously on **10,000+ managed enterprise endpoints**: Swift and SwiftUI product code on top of Apple's system-level frameworks (NetworkExtension, XPC, LaunchDaemon), with full ownership of testing, code signing, notarization, and release. I have also designed, built and published my own application to the Apple App Store as sole developer.

SELECTED IMPACT

- Reduced concurrency-related crash rates by **40%** across the managed fleet through a staged migration to Swift Concurrency.
- Reduced database lookup latency by **50%** and file-transfer failure rates by **35%** through persistence-layer and networking redesigns.
- Published **CodeForge** to the Apple App Store as sole developer architecture through App Review approval.

PROFESSIONAL EXPERIENCE

42Gears Mobility Systems Pvt. Ltd.

February 2023 – Present

Bengaluru, India | Enterprise Unified Endpoint Management (UEM) software vendor | 42gears.com

Software Engineer, iOS & macOS

July 2023 – Present

- Architected and maintain the privileged macOS system agent for **SureMDM**, the company's flagship endpoint-management product **LaunchDaemon** daemonization, **XPC** inter-process communication, and privileged helper tools deployed across **10,000+ enterprise endpoints**.
- Migrated legacy **GCD** and **DispatchQueue** code to **Swift Concurrency** (async/await, actors, structured tasks) in stages without a feature freeze, reducing concurrency-related crash rates by **40%**.
- Redesigned the **Core Data** persistence layer schema, indexing, and batch fetch and update operations reducing data lookup latency by **50%** at fleet scale.
- Engineered a resumable chunked download system over **URLSession** with progress callbacks, retry semantics, and a bounded concurrent worker pool, reducing transfer failure rates by **35%**.
- Built **NetworkExtension** providers (NEFilterProvider, NEAppProxyProvider) delivering real-time network traffic filtering and per-application data usage attribution.
- Migrated core modules from **MVVM** to **VIPER**, applying dependency injection to make business logic independently unit-testable.
- Own release engineering end to end: **Playwright** and **Appium** regression automation, code signing, notarization, PKG/DMG packaging, and automated distribution via **GitLab CI/CD**.
- Led a security hardening programme migrating plaintext local storage to **CryptoKit** and **Keychain** encrypted formats and replacing deprecated third-party libraries with first-party Apple SDKs, maintaining backward compatibility throughout.
- Implemented **Just-In-Time privilege escalation** plus geofence and schedule-based compliance policy enforcement using **Core Location** and reverse geocoding.
- Built an internal diagnostics platform adopted by **20+ engineers and QA** providing real-time log parsing, payload inspection, and live process state inspection.
- Automated release validation with local **LLM** evaluation and **multi-agent workflows** covering build verification and deployment checks.
- Collaborate daily with distributed product, QA, and backend colleagues in **Agile** sprints and participate in code review.

Software Engineer Intern, iOS

February 2023 – June 2023

- Delivered production features in **Swift**, **UIKit**, and **SwiftUI**; implemented secure local persistence with **Core Data**, **UserDefaults**, and **Keychain**; converted to a permanent role after five months.

PERSONAL PROJECTS

- CodeForge Coding Practice IDE

Swift, SwiftUI, Swift Concurrency, JavaScriptCore, XCTest

Apple App Store

 - Native macOS and iOS application built and published solo, featuring a dual-path code execution engine (subprocess on macOS, JavaScriptCore on iOS) behind a single protocol abstraction, an interactive test runner, and a 2D matrix visualizer. Fully offline with no backend dependency.
 - apps.apple.com/app/id6787703716 | github.com/sachin6174/SwiftForge
- Agentic Gig Platform

Next.js, Firebase, Python, Kotlin, Google Cloud

Google Cloud Agentic AI Hackathon 2025

 - AI agent platform providing agricultural advisory to farmers; selected among the top 700 teams out of more than 57,000 participating developers in Google Cloud's global hackathon. github.com/abhikumar002/Agentic-Gig-Project
- Secure Text

JavaScript, Chrome Extension APIs

Chrome Web Store

 - Published browser extension providing Base64 and Base32 encoding and decoding. chromewebstore.google.com/detail/secure-text

TECHNICAL SKILLS

Languages: Swift, Objective-C, C++, JavaScript, Python, Bash/Shell, SQL

Apple Platforms: SwiftUI, UIKit, Foundation, Combine, Swift Concurrency (async/await, actors, Sendable), GCD, Core Data, SwiftData, NetworkExtension, XPC, LaunchDaemon, Core Location, CryptoKit, Keychain Services, Core ML, Auto Layout

Architecture: VIPER, MVVM, MVC, Clean Architecture, SOLID principles, protocol-oriented programming, dependency injection, design patterns, modularization, system design

Testing & Quality: XCTest, XCUITest, unit testing, UI testing, TDD, Xcode Instruments (Time Profiler, Leaks, Allocations), memory management/ARC, code review, SonarQube, Playwright, Appium

Delivery: Git, GitLab CI/CD, GitHub Actions, Swift Package Manager, CocoaPods, Fastlane, TestFlight, App Store Connect, code signing, notarization, Jira, Agile/Scrum

Networking & Data: REST APIs, URLSession, JSON/Codable, SQLite, Firebase, offline storage

AI & Automation: Local LLMs, AI agents, multi-agent workflows, LLM evaluation, Claude Code, GitHub Copilot, Cursor

Languages spoken: English (professional working proficiency), Hindi (native)

EDUCATION

Chandigarh Group of Colleges, Landran

Bachelor of Engineering (B.E.), Computer Science and Engineering GPA 7.9/10 (approx. 3.2/4.0)

August 2019 – May 2023

Punjab, India

CERTIFICATIONS

- System Design and Data Structures in C++** Coding Ninjas, 2022. Solved+ algorithm problems on LeetCode.
