SUMMARY

iOS and macOS Software Engineer with 3+ years building enterprise endpoint-management software running on **10,000+ managed macOS devices**. Strong in Swift, SwiftUI, UIKit, Swift Concurrency, Core Data, and system-level frameworks (NetworkExtension, XPC, LaunchDaemon, CryptoKit), with end-to-end ownership from architecture and unit testing through code signing, notarization, PKG/DMG packaging, and App Store Connect release. Shipped an independent macOS and iOS app to the App Store and automated release verification using local LLM and multi-agent workflows.

WORK EXPERIENCE

42Gears Mobility Systems Pvt. Ltd.

February 2023 – Present

Bengaluru, India | Unified Endpoint Management (UEM) SaaS

iOS & macOS Developer

July 2023 – Present

- Architected and shipped macOS system agents for **SureMDM** using **LaunchDaemon** process daemonization, **XPC** inter-process communication, and privileged helper tools, running continuously across **10,000+ enterprise endpoints**.
- Built enterprise **app lifecycle management** (PKG/DMG install, upgrade, and uninstall) in Swift with shell scripting and XPC, replacing manual IT provisioning across the managed fleet.
- Engineered a resilient **Download Manager** with resumable chunked transfers, progress callbacks, and concurrent worker queues, reducing file-transfer failure rates by **35%**.
- Architected **NetworkExtension** modules (NEFilterProvider, NEAppProxyProvider) delivering real-time per-app data usage tracking and network traffic filtering on managed devices.
- Migrated legacy asynchronous workflows to **Swift Concurrency** (async/await, actors, structured tasks) alongside existing GCD and DispatchQueue code, cutting concurrency-related crash rates by **40%**.
- Optimized **Core Data** telemetry persistence through model redesign, indexing, and batch fetch and update operations, reducing data lookup latency by **50%** at fleet scale.
- Migrated core modules from **MVVM** to **VIPER**, applying dependency injection to decouple business logic from view controllers and improve unit testability and long-term maintainability.
- Implemented **Just-In-Time (JIT) privilege escalation**, **Time Fence** scheduling, and location-aware policy enforcement using **Core Location** and reverse geocoding to meet enterprise security and compliance requirements.
- Hardened local data security by migrating plaintext storage to encrypted formats via **CryptoKit** and **Keychain**, and replacing deprecated third-party libraries with first-party SDKs while preserving backward compatibility.
- Owned macOS release engineering end to end: **code signing**, **notarization**, PKG/DMG packaging, and automated build distribution through **GitLab CI/CD**.
- Built and maintained **Playwright** and **Appium** test automation validating regression workflows and end-to-end device-management actions before every release.
- Built an internal diagnostics utility adopted by **20+ engineers and QA**, featuring real-time log parsing, job payload inspection, and live state inspection to shorten debugging cycles.
- Automated release validation with local **LLM** evaluation and **multi-agent AI workflows** covering build verification and deployment checks, reducing manual regression effort.

iOS Developer Intern

February 2023 – June 2023

- Delivered production features in **Swift**, **UIKit**, and **SwiftUI**, applying asynchronous programming patterns across iOS and macOS targets.
- Contributed to PKG/DMG creation, code signing, and notarization, and implemented secure local storage with **Core Data**, **UserDefaults**, and **Keychain**.
- Worked in **Agile** sprints using **Jira**, with static analysis and code quality gates enforced through **SonarQube**.

PROJECTS

CodeForge DSA & Interview Prep IDE *Swift, SwiftUI, Swift Concurrency, JavaScriptCore*

Shipped to App Store

- Designed and shipped an offline **macOS and iOS** coding-practice IDE with 5 practice tracks, a dual-path execution engine (subprocess and **JavaScriptCore**), an interactive test runner, and a 2D matrix visualizer.
- Owned the full release path solo: architecture, **XCTest** coverage, App Store Connect submission, TestFlight distribution, and review approval.
- apps.apple.com/app/id6787703716 | github.com/sachin6174/SwiftForge

Secure Text *JavaScript, Chrome Extension APIs*

Published on Chrome Web Store

- Built and published a Chrome extension providing Base64 and Base32 text encoding and decoding backed by Chrome storage APIs.
- chromewebstore.google.com/detail/secure-text | github.com/sachin6174/secure-text-chrome-extension

TECHNICAL SKILLS

Languages: Swift, Objective-C, C++, JavaScript, Bash/Shell scripting, SQL

iOS & macOS: SwiftUI, UIKit, Swift Concurrency (async/await, actors, Sendable), GCD/DispatchQueue, Combine, Core Data, SwiftData, Foundation, NetworkExtension, Core Location, CryptoKit, Keychain Services, XPC, LaunchDaemon/launchd, Core ML, Auto Layout, App Lifecycle, Human Interface Guidelines

Architecture & Design: MVVM, MVC, VIPER, Clean Architecture, SOLID principles, Protocol-Oriented Programming, Dependency Injection, Delegation, Observer, Singleton, Modularization, System Design, Data Structures & Algorithms

Testing & Quality: XCTest, XCUITest, Unit Testing, UI Testing, TDD, Playwright, Appium, SonarQube, Xcode Instruments (Time Profiler, Leaks, Allocations), Memory Management/ARC, Debugging, Code Review

Networking & Data: REST APIs, URLSession, JSON/Codable, SQLite, Firebase, Offline Storage, Traffic Filtering, App Data Usage Tracking

Build & Release: Xcode, Swift Package Manager (SPM), CocoaPods, Fastlane, Git, GitLab CI/CD, GitHub Actions, TestFlight, App Store Connect, Code Signing, Notarization, PKG/DMG packaging, Provisioning Profiles, Jira, Agile/Scrum

AI & Automation: Local LLMs, AI agents, multi-agent workflows, Claude Code, GitHub Copilot, Cursor, prompt engineering, release automation

EDUCATION

Chandigarh Group of Colleges, Landran

Bachelor of Engineering in Computer Science and Engineering CGPA: 7.9/10

August 2019 – May 2023

Mohali, Punjab, India

ACHIEVEMENTS & CERTIFICATIONS

- **Google Cloud Agentic AI Hackathon 2025** selected among the **top 700 teams out of 57,000+ developers**; built an AI advisory platform for farmers using Next.js, Firebase, Python, and Kotlin.
- **System Design** Coding Ninjas, February 2022: scalability, load balancing, database design, and microservices architecture.
- **Data Structures in C++** Coding Ninjas, April 2022: core data structures, algorithms, and complexity analysis.
