

Sachin Kumar

iOS Developer | macOS Developer | Swift Developer

Email: sachinmehtab@gmail.com

Phone: +91 9501841073

Location: Bengaluru, Karnataka, India

LinkedIn: linkedin.com/in/sachinkumar6174

GitHub: github.com/sachin6174

Portfolio: sachinserver.in

LeetCode: leetcode.com/u/sachinkumar6174

Total Experience: 3+ years

Professional Summary

iOS Developer and macOS Developer with 3+ years of experience building enterprise mobility and endpoint management applications in Swift, deployed across 10,000+ managed devices. Experienced in Swift, Objective-C, SwiftUI, UIKit, Swift Concurrency, Core Data, REST API integration, MVVM and VIPER architecture, SOLID principles, unit testing with XCTest and XCUITest, multithreading, memory management, performance tuning, and CI/CD automation. Published an application to the Apple App Store as sole developer. Experienced in the full software development life cycle within Agile and Scrum teams.

Key Skills

Programming Languages: Swift, Objective-C, C++, JavaScript, Bash, Shell Scripting, SQL

iOS and macOS: iOS SDK, macOS SDK, SwiftUI, UIKit, Foundation, Combine, Cocoa, Cocoa Touch, Auto Layout, App Lifecycle, Core Data, SwiftData, Core Location, Core ML, CryptoKit, Keychain, NetworkExtension, XPC, LaunchDaemon, Human Interface Guidelines

Concurrency and Performance: Swift Concurrency, async/await, Actors, Sendable, Grand Central Dispatch, GCD, DispatchQueue, Operation Queue, Multithreading, Memory Management, ARC, Xcode Instruments, Time Profiler, Leaks, Performance Tuning

Architecture and Design: MVVM, MVC, VIPER, Clean Architecture, SOLID Principles, OOPs, Protocol-Oriented Programming, Dependency Injection, Design Patterns, Singleton, Delegate, Observer, Factory, Modularization, System Design, Low Level Design

Testing: XCTest, XCUITest, Unit Testing, UI Testing, Integration Testing, Test Driven Development, TDD, Test Automation, Playwright, Appium, SonarQube, Code Review, Debugging

Web Services and Data: REST API, RESTful Web Services, URLSession, JSON, Codable, SQLite, UserDefaults, Firebase, Offline Storage, Caching

Tools and DevOps: Xcode, Git, GitLab, GitLab CI/CD, GitHub Actions, Swift Package Manager, SPM, CocoaPods, Fastlane, TestFlight, App Store Connect, Code Signing, Notarization, PKG, DMG, Jira, Confluence, Agile, Scrum

Emerging Technologies: Generative AI, GenAI, Local LLM, AI Agents, Multi-Agent Workflows, Prompt Engineering, Release Automation

Work Experience

42Gears Mobility Systems Private Limited

Bengaluru, Karnataka, India

Enterprise Mobility Management (EMM) and Unified Endpoint Management (UEM) products

February 2023 to Present

iOS and macOS Developer

July 2023 to Present

- Developed and maintained macOS system agents for the SureMDM enterprise device management product using LaunchDaemon process daemonization, XPC inter-process communication, and privileged helper tools, deployed across 10,000+ enterprise endpoints.

- Developed enterprise application lifecycle management modules for PKG and DMG installation, upgrade, and uninstallation using Swift, shell scripting, and XPC.
- Migrated legacy Grand Central Dispatch and DispatchQueue code to Swift Concurrency using async/await and Actors, reducing concurrency-related crash rates by 40 percent.
- Optimized Core Data persistence through data model redesign, indexing, and batch fetch and update operations, reducing data lookup latency by 50 percent.
- Engineered a resumable chunked Download Manager over URLSession with progress callbacks, retry handling, and concurrent worker queues, reducing file transfer failure rates by 35 percent.
- Developed NetworkExtension modules using NEFilterProvider and NEAppProxyProvider for real-time network traffic filtering and per-application data usage tracking.
- Migrated core modules from MVVM to VIPER applying dependency injection, decoupling business logic from view controllers and improving unit testability.
- Implemented Just-In-Time privilege escalation, Time Fence scheduling, and Core Location based geofence policy enforcement for enterprise security and compliance.
- Migrated unencrypted sensitive local data to encrypted storage using CryptoKit and Keychain Services, and replaced deprecated third-party libraries with first-party Apple SDKs while maintaining backward compatibility.
- Built and maintained automated regression and end-to-end test suites using Playwright and Appium.
- Managed build, code signing, notarization, packaging, and automated distribution through GitLab CI/CD pipelines.
- Developed an internal diagnostic utility adopted by 20 or more engineers and QA providing real-time log parsing, job payload inspection, and live state inspection.
- Automated release verification and deployment validation using local LLM evaluation and multi-agent AI workflows.
- Participated in Agile and Scrum ceremonies, sprint planning, code reviews, and defect triage using Jira, with code quality gates enforced through SonarQube.

iOS Developer Intern

February 2023 to June 2023

- Developed features in Swift, UIKit, and SwiftUI using asynchronous programming patterns for iOS and macOS applications.
- Implemented secure local data storage using Core Data, UserDefaults, and Keychain.
- Contributed to PKG and DMG creation, code signing, and notarization; worked in Agile sprints using Jira with SonarQube static analysis.

Projects

CodeForge, DSA and Interview Prep IDE

Technologies: Swift, SwiftUI, Swift Concurrency, JavaScriptCore, XCTest

Published on the Apple App Store, sole developer

- Designed and published an offline macOS and iOS coding practice IDE featuring 5 practice tracks, a dual-path execution engine using subprocess and JavaScriptCore, an interactive test runner, and a 2D matrix visualizer.
- Independently handled architecture, unit testing, TestFlight beta distribution, App Store Connect submission, and App Review approval.
- App Store: apps.apple.com/in/app/codeforge-dsa-interview-prep/id6787703716
- GitHub: github.com/sachin6174/SwiftForge

Agentic Gig Platform

Technologies: Next.js, Firebase, Python, Kotlin, Google Cloud

Google Cloud Agentic AI Hackathon 2025

- Built an AI agent platform providing expert agricultural advice to farmers.
- Selected among the top 700 teams out of more than 57,000 developers.
- GitHub: github.com/abhikumar002/Agentic-Gig-Project

Secure Text

Technologies: JavaScript, Chrome Extension APIs

Published on the Chrome Web Store

- Built and published a Chrome extension providing Base64 and Base32 text encoding and decoding using Chrome storage APIs.
- Chrome Web Store: chromewebstore.google.com/detail/secure-text

Education

Bachelor of Engineering (B.E.), Computer Science and Engineering

Chandigarh Group of Colleges, Landran, Mohali, Punjab, India

August 2019 to May 2023

CGPA: 7.9 out of 10

Certifications and Achievements

- System Design, Coding Ninjas, February 2022. Scalability, load balancing, database design, and microservices architecture. Certificate
- Data Structures in C++, Coding Ninjas, April 2022. Core data structures, algorithms, and complexity analysis. Certificate
- Google Cloud Agentic AI Hackathon 2025. Selected among the top 700 teams out of more than 57,000 developers.
