PROFILE SNAPSHOT

Total Experience: 3+ years (February 2023 – Present) | **Current Role:** iOS & macOS Developer, 42Gears Mobility Systems
Primary Skill: Swift (iOS & macOS application development) | **Secondary:** Objective-C, C++, JavaScript, Shell scripting
Domain: Enterprise Mobility Management (EMM) / Unified Endpoint Management (UEM) / Mobile Device Management (MDM)
Current Location: Bengaluru
Education: B.E. Computer Science and Engineering, 2023 | **CGPA:** 7.9/10

PROFESSIONAL SUMMARY

iOS and macOS application developer with 3+ years of hands-on experience in **Swift**, **SwiftUI**, **UIKit**, and **Objective-C**, delivering enterprise mobility solutions deployed across **10,000+ managed devices**. Experienced across the complete software development life cycle (SDLC) requirement analysis, design, development, unit testing, integration testing, defect fixing, deployment, and production support working in **Agile/Scrum** teams using **Jira**. Strong in **OOPs**, **SOLID** principles, design patterns, **MVVM/VIPER** architecture, **Core Data**, **REST API** integration, multithreading, memory management, and **CI/CD** pipeline automation using **GitLab**.

TECHNICAL SKILL MATRIX

Programming Languages: Swift, Objective-C, C++, JavaScript, Bash/Shell Scripting, SQL
Mobile Technologies: iOS SDK, macOS SDK, SwiftUI, UIKit, Foundation, Combine, Cocoa, Cocoa Touch, Auto Layout, App Lifecycle, Human Interface Guidelines
Concurrency & Performance: Swift Concurrency (async/await, actors, Sendable), Grand Central Dispatch (GCD), DispatchQueue, Operation Queues, Multithreading, Memory Management, ARC, Xcode Instruments (Time Profiler, Leaks, Allocations), Performance Tuning
Data & Persistence: Core Data, SwiftData, SQLite, UserDefaults, Keychain, Offline Storage, Caching, Data Modelling, Indexing, Batch Processing
Architecture & Design: MVVM, MVC, VIPER, Clean Architecture, SOLID Principles, OOPs, Protocol-Oriented Programming, Dependency Injection, Design Patterns (Singleton, Delegate, Observer, Factory, Adapter), Modularization, Reusable Component Libraries, System Design, Low Level Design (LLD)
Web Services & Integration: RESTful APIs, URLSession, JSON, Codable, XML Parsing, Firebase, Third-party SDK Integration
Apple System Frameworks: NetworkExtension, XPC, LaunchDaemon/launchd, Core Location, CryptoKit, Security/Keychain Services, Core ML
Testing & Quality: XCTest, XCUITest, Unit Testing, Integration Testing, UI Testing, Test Driven Development (TDD), Test Automation, Playwright, Appium, SonarQube, Code Review, Debugging, Defect Triage
DevOps & Tools: Xcode, Git, GitLab, GitLab CI/CD, GitHub Actions, Swift Package Manager (SPM), CocoaPods, Fastlane, TestFlight, App Store Connect, Code Signing, Notarization, PKG/DMG Packaging, Jira, Confluence
Methodologies: Agile, Scrum, Sprint Planning, Daily Stand-ups, Code Reviews, Retrospectives, SDLC, STLC
Emerging Technologies: Generative AI, Local LLMs, AI Agents, Multi-Agent Workflows, Prompt Engineering, Release Automation

EMPLOYMENT HISTORY

42Gears Mobility Systems Private Limited <i>Bengaluru, Karnataka Enterprise Mobility Management (EMM) product organisation</i> iOS & macOS Developer iOS Developer Intern	February 2023 – Present <i>July 2023 – Present</i> <i>February 2023 – June 2023</i>
---	--

PROJECT DETAILS

Project 1: SureMDM Agent for macOS <i>Enterprise Device Management Platform</i>	July 2023 – Present
Client / Domain: Enterprise IT, BFSI, Retail, Healthcare and Logistics customers using 42Gears' UEM platform Team Size: Role: Developer Environment: Swift, Objective-C, SwiftUI, UIKit, Core Data, XPC, LaunchDaemon, NetworkExtension, CryptoKit, Xcode, Git, GitLab CI/CD, Jira, SonarQube, macOS Description: Enterprise macOS device-management agent providing application lifecycle management, security policy enforcement, network monitoring, device telemetry, and remote administration across a fleet of 10,000+ managed endpoints.	

- **Responsibilities:**

- * Designed and developed privileged macOS system agents using **LaunchDaemon** process daemonization, **XPC** inter-process communication, and privileged helper tools.
- * Developed application lifecycle management modules for **PKG/DMG** installation, upgrade, and uninstallation using Swift and shell scripting.
- * Developed **NetworkExtension** modules (**NEFilterProvider**, **NEAppProxyProvider**) for network traffic filtering and per-application data usage tracking.
- * Implemented device monitoring modules for hardware state changes, system uptime tracking, user management, and remote administrator actions such as reboot and shutdown.
- * Implemented **Just-In-Time (JIT)** privilege escalation, **Time Fence** scheduling, and **Core Location** based geofence policy enforcement for enterprise compliance.
- * Performed architectural migration from **MVVM** to **VIPER**, applying dependency injection to improve testability and maintainability.
- * Optimized **Core Data** persistence through data model redesign, indexing, and batch operations, achieving a **50% reduction** in data lookup latency.
- * Migrated legacy **GCD** based asynchronous code to **Swift Concurrency**, achieving a **40% reduction** in concurrency-related crash rates.
- * Automated regression and end-to-end test suites using **Playwright** and **Appium**.
- * Managed build, code signing, notarization, packaging, and automated distribution through **GitLab CI/CD** pipelines.
- * Participated in **Agile/Scrum** ceremonies, sprint planning, code reviews, and defect triage using **Jira**, with code quality enforced through **SonarQube**.

Project 2: Resilient Download Manager Module *Enterprise Payload Delivery Component* **Within SureMDM**

- **Environment:** Swift, URLSession, Swift Concurrency, Core Data, macOS | **Role:** Developer | **Team Size:**
- **Description:** Reusable download subsystem for delivering application packages and policy payloads to managed endpoints over unreliable enterprise networks.
- **Responsibilities:** Designed resumable chunked transfer logic, progress callback interfaces, retry semantics, and a bounded concurrent worker queue, achieving a **35% reduction** in file-transfer failure rates across the managed fleet.

Project 3: Internal Developer & QA Diagnostic Utility *Internal Productivity Tool* **Within 42Gears**

- **Environment:** Swift, SwiftUI, Foundation, macOS | **Role:** Developer (sole owner) | **Users:** 20+ engineers and QA
- **Description:** Internal macOS utility providing real-time log parsing, job payload inspection, and live agent state inspection to reduce defect triage and debugging turnaround for the development and QA teams.
- **Responsibilities:** Owned requirement identification, design, development, and rollout; adopted by **20+ engineers and QA** across the organisation.

Project 4: Data Security & Framework Modernization *Security Hardening Initiative* **Within SureMDM**

- **Environment:** Swift, CryptoKit, Keychain Services, macOS | **Role:** Developer
- **Description:** Organisation-wide initiative to eliminate unencrypted sensitive data at rest and retire deprecated third-party dependencies from the macOS agent.
- **Responsibilities:** Migrated plaintext local storage to encrypted formats using **CryptoKit** and **Keychain Services**, replaced obsolete legacy libraries with first-party Apple SDKs, and ensured complete **backward compatibility** for devices on older macOS versions.

Project 5: CodeForge DSA & Interview Prep IDE *Personal Product, published on Apple App Store* **Personal Project**

- **Environment:** Swift, SwiftUI, Swift Concurrency, JavaScriptCore, XCTest, App Store Connect | **Role:** Sole Developer
- **Description:** Offline macOS and iOS coding practice IDE featuring 5 practice tracks, a dual-path execution engine (subprocess and JavaScriptCore), an interactive test runner, and a 2D matrix visualizer.
- **Responsibilities:** Independently handled architecture, development, unit testing, TestFlight beta distribution, App Store Connect submission, and App Review approval. apps.apple.com/app/id6787703716

EDUCATION

Chandigarh Group of Colleges, Landran

Bachelor of Engineering (B.E.), Computer Science and Engineering CGPA: 7.9/10

August 2019 – May 2023

Mohali, Punjab, India

CERTIFICATIONS & ACHIEVEMENTS

- **System Design** Coding Ninjas (November 2021 – February 2022): scalability, load balancing, database design, microservices architecture.
- **Data Structures in C++** Coding Ninjas (January 2022 – April 2022): core data structures, algorithms, complexity analysis.
- **Google Cloud Agentic AI Hackathon 2025** selected among the top 700 teams out of 57,000+ developers; built an AI advisory platform using Next.js, Firebase, Python, and Kotlin.

PERSONAL DETAILS

- **Languages Known:** English, Hindi | **Current Location:** Bengaluru, Karnataka | **Nationality:** Indian
- *[Deliberately omitted: photograph, date of birth, marital status, father's name. These are legacy biodata fields they break ATS parsing, add no value, and create bias risk. Do not add them back, even if an older template or a consultant asks.]*
