SUMMARY

iOS Software Engineer with 3+ years of experience in iOS and macOS enterprise mobility solutions. Specialized in Swift, SwiftUI, UIKit, Core Data, Network Extensions, Swift Concurrency, and XPC communication. Experienced in architecting daemonized macOS agents, background network monitoring engines, security policy modules, and deploying production apps to App Store Connect and TestFlight.

WORK EXPERIENCE

42 Gears Mobility Systems Private Limited

July 2023 – Present

iOS Developer

Bangalore, India

- Developed enterprise **app management jobs (PKG/DMG)** installation, upgrades, and uninstallation) leveraging **shell scripting, XPC inter-process communication**, and **LaunchDaemon** process daemonization across **10,000+** enterprise **macOS** endpoints.
- Engineered a resilient **Download Manager** for file transfer operations, supporting **resumable chunk downloads, progress callbacks**, and task scheduling via **concurrent worker queues**.
- Architected **Network Extension** modules using the **NetworkExtension framework (NEFilterProvider/NEAppProxyProvider)** to implement real-time **App Data Usage tracking** and network traffic filtering across enterprise devices.
- Engineered location-aware security enforcement using **Core Location** and **reverse geocoding** to execute policy restrictions and ensure data compliance in restricted enterprise zones.
- Implemented **Time Fence** policy enforcement modules for schedule-based access control and time-restricted execution windows on managed endpoints.
- Utilized **Core Data** for persistent storage and management of large-scale device telemetry, optimizing data models, indexes, and batch operations for query performance and data integrity.
- Built **device monitoring modules** for hardware state changes, system uptime tracking, user management, and remote administrator actions (system reboot, shutdown).
- Contributed to architectural refactoring from **MVVM** to **VIPER**, decoupling business logic from UI controllers to improve unit testability and long-term codebase maintainability.
- Created structured **analytics and event processing pipelines** using **Foundation** and **Core Data** to capture device events, health metrics, and network usage diagnostics for IT administrators.
- Enhanced application thread safety and stability by refactoring legacy asynchronous workflows with **Swift Concurrency (async/await, Actors, and GCD DispatchQueues)**.
- Managed **macOS helper agents**, status-bar utility applications, app packaging (**PKG, DMG**), notarization, and automated build distribution workflows using **GitLab CI/CD**.
- Implemented **Just-In-Time (JIT) Privilege Access** workflows for on-demand privilege escalation, ensuring adherence to enterprise security and compliance standards.
- Engineered an internal **developer & QA diagnostic utility** adopted by **20+ engineers**, featuring **real-time log parsing, job payload inspection**, and direct state inspection to accelerate debugging cycles.
- Built and maintained **Playwright** and **Appium** test automation scripts to validate regression workflows and end-to-end device management actions.
- Led data security & framework modernization by migrating unencrypted sensitive data to **encrypted storage formats** and replacing obsolete legacy libraries with modern SDKs, while ensuring seamless **backward compatibility**.
- Integrated local **LLM evaluation systems** and multi-agent **AI workflows** to automate the full release pipeline, build verification, and deployment validation, significantly reducing human errors.

INTERNSHIP

42 Gears Mobility Systems Private Limited

February 2023 – June 2023

iOS Developer Intern

Bangalore, India

- Gained hands-on experience in **Swift, UIKit, SwiftUI**, and **asynchronous programming** techniques for iOS and macOS applications.
- Assisted in **PKG/DMG** creation, code signing, notarization, and worked with **Core Data, UserDefaults**, and **Keychain** for secure local data storage.
- Developed skills in **macOS shell scripting, Agile workflows** with **Jira**, and code quality management using **SonarQube**.

PROJECTS

SureMDM Agent for macOS – Enterprise Device Management Platform

Professional Project

- **Details:** Enterprise macOS device management agent featuring app lifecycle management, policy enforcement, and remote administration capabilities.
- **Product Link:** <https://www.42gears.com/products/mobile-device-management/suremdm-agent-for-macos-past-releases/>

CodeForge – Built with SwiftUI, Swift Concurrency, JavaScriptCore

Personal Project

- **Details:** Offline **macOS & iOS** coding practice IDE featuring **5 practice tracks**, dual-path execution engine (**subprocess & JavaScriptCore**), interactive test runner, and 2D matrix visualizer.
- **App Store Link:** <https://apps.apple.com/in/app/codeforge-dsa-interview-prep/id6787703716>
- **GitHub Link:** <https://github.com/sachin6174/SwiftForge>

Secure Text – Built with JavaScript, Chrome APIs

Personal Project

- **Details:** **Chrome extension** providing text encoding and decoding utilities utilizing **Base64/Base32** algorithms and Chrome storage APIs.
- **Extension Store Link:** <https://chromewebstore.google.com/detail/secure-text/ankgchfieimijhlcjcongijapefmei>
- **GitHub Link:** <https://github.com/sachin6174/secure-text-chrome-extension>

TECHNICAL SKILLS

Programming Languages: Swift, Objective-C, JavaScript, C++

iOS / macOS Development: iOS SDK, macOS SDK, UIKit, SwiftUI, Combine, Swift Concurrency, Network Extensions (NetworkExtension framework), Core Data, Core Location, Foundation

Tools & Distribution: Xcode, Instruments, SPM, CocoaPods, GitLab CI/CD, TestFlight, App Store Connect, Git, Jira, SonarQube

AI & Automation: Local LLMs, AI Agents, Multi-Agent Workflows, Release Automation, XCTest, XCUITest, Playwright, Appium, TDD

Architecture Patterns: MVC, MVVM, VIPER, Clean Architecture, Protocol-oriented Programming, Dependency Injection

Networking & Storage: RESTful APIs, App Data Usage Tracking, Traffic Filtering, Core Data, SQLite, URLSession, Firebase, Push Notifications

Development Practices: Agile Methodology, Memory Management, Auto Layout, Performance Optimization, Code Review, Process Daemonization

EDUCATION

Chandigarh Group of Colleges

August 2019 – May 2023

Bachelor of Engineering in Computer Science, CGPA: 7.9

Landran, Mohali

CERTIFICATIONS

- **System Design:** Coding Ninjas (November 2021 – February 2022) - Completed course covering scalability, load balancing, database design, and microservices architecture.
- **Data Structures in C++:** Coding Ninjas (January 2022 – April 2022) - Completed course covering core data structures, algorithms, and complexity analysis.

ACHIEVEMENTS

- **Google Cloud Agentic AI Hackathon 2025:** Selected among top 700 teams from 57,000+ developers. Built an AI-powered platform providing farmers expert advice using Next.js, Firebase, Python, and Kotlin.

INTERESTS

- Exploring AI tools, Reading Literature, Drawing, Listening to Music
